

Confero MICE

Confero is an excellent software for the overall plan for organizing various events and conferences. It offers tools for the management of reservations, creation of offers and efficient organization of events. It is suitable for hotels, congress spaces and other places where events are held.

Advantages:

- Effective planning and significant time saving
- A tool for complex operations – easy management within one application
- Cloud-based system available from anywhere
- Integration with **HotelTime PMS**

Hours saved
when planning an event

Effective planning and significant time saving

The system enables detailed and efficient planning of events. A hotel can send an overview or confirmation to a customer in each step of planning. Even frequent changes in the planning of events will not burden the staff. The system allows these changes to be made easily.

Extensive reporting options are also available – on future development, bookings, profit, event costs and more. The possibility of automatically generating offers or contracts into pre-set templates also saves a lot of time.

A tool for complex operations – easy management within one application

The system is an ideal solution for complex processes. It enables their practical management thanks to the multi-property solution, which offers the option of registering

multiple locations, separate reporting for each location, and more.

Cloud-based system available from anywhere

Confero is a cloud-based system accessible through any web browser on any 'smart' device. It is user-friendly and can be easily adapted to the needs of a particular operation.

In addition, Confero allows management to view data about operations on any device, even remotely from anywhere.
